5 The Thirty-Day Plan

6 Vendor Bench Checklist

7 State Questions Worksheet

PJ STANDLEY

B.S. in Engineering Technology · USAII Certified AI Scientist (CAIS™) and Certified AI Consultant (CAIC™)

These are the Five Gates card, the Deal Readiness Tracker, the sample documents and the four worksheets from the book, set on letter paper with room to write. Print as many copies as you need.

Free companion to Powered Buildings by PJ Standley. Education only; not legal, engineering or investment advice.

They are education only. They are not legal, engineering or investment advice, and nothing on them states capacity, feasibility, value or a pass.

WORKSHEET 1 OF 7

The Five Gates Card

One page. Copy it and keep it by the screen. It comes from chapter 3, "The Five Gates". Ten minutes a building, about two minutes a gate.

Building: _____ **Parcel no.:** _____ **Date:** _____

Min. 0–2 **1. Power**	Can the utility deliver enough electricity to this address, and when?		
Open this	**Record this**	**Stop when**	**Who gives the real answer**
Aerial, street view, property record	Visible equipment, past use, serving utility	The service is gone and the utility offers no path, or the building never had heavy power and you have better candidates	The serving utility, in writing. An electrical engineer for the equipment

Min. 2–4 **2. Permits**	Is this use allowed here, and what approvals stand in the way?		
Zoning map and code, FEMA flood map	District, exact words of the closest listed use, flood designation, nearest homes	The zoning plainly does not fit and the parcel sits among homes	Planning staff and the building official. A land use attorney for hard cases

Min. 4–6 **3. Structure**	Can the floor, the roof and the doors take the equipment?		
Property record, listing, aerial	Floor type, stories, docks, clear height if shown	Be slow to stop. Upper floors only: move it down the list	A licensed structural engineer

Min. 6–8 **4. Cooling**	Is there room outside to get rid of the heat?		
Aerial	Yard size, pipe route, roof, room for generators	No usable yard and no usable roof: move it down the list	A licensed mechanical engineer

Min. 8–10 **5. Connectivity**	Does enough fiber reach the building, by more than one route?		
FCC map, street view	Reported providers, markers and handholes	Almost never from a desk	The carriers, through a fiber survey

For each gate, write one line in three parts.

1. What I know, and where I got it.
2. What I do not know.
3. Who can tell me.

Then give the building one of two results.

- **Stop.** There is a clear, documented reason this building is a poor candidate today.
- **Go and see it.** Nothing stopped you. Call the owner and ask for twenty minutes and one electric bill.

"Unknown" is a status on a gate, not a result. Three unknowns and no stop is a good reason to make the call. Do not turn the page into a count. One fatal problem can end a project. Several fixable ones need not.

Before the gates, ask which megawatt. IT load is what the computers use. Facility load is everything the site draws at the meter. Chapter 2 shows how far apart they are.

Three sentences to keep apart, always.

- "The building has a 4,000 amp service." That is a nameplate.
- "A bill from a production year shows a past peak of so many kilowatts." That is history.
- "The utility has not yet confirmed capacity." That stays true until the utility writes otherwise.

Nothing on this page claims capacity, approval or a pass.

WORKSHEET 2 OF 7

Deal Readiness Tracker

One sheet for each building. Copy this page.

> **When to use it.** Start this sheet after the walk, for a building that the ten-minute screen in chapter 3 sent you to see. It tracks what has been confirmed, in writing, on the way to a deal. It has no score. It does not approve a building, and it does not replace the utility's written answer or a licensed engineer's finding. The cut points are mine. Change them to fit your buyer.

Building: _____ **Parcel no.:** _____ **Date started:** _____

Serving utility (and source): _____ **Kept by:** _____

Target size for this building (total site load): _____ MW

The four status words

Give each of the eleven lines one status. These are the same four words the screen in chapter 3 uses.

Status	Meaning
Good	The evidence meets the "good" description, and you hold it in writing
Maybe	In between, or a clue without confirmation
Stop	The evidence meets the "stop" description
Unknown	You do not have the facts yet. Write U, and who can answer.

Write the evidence, its source and its date beside every status. A status with no evidence is "unknown". Update the sheet each time a written answer arrives.

Gate 1. Power

1. Utility capacity, in writing

Good	Maybe	Stop
The utility confirms in writing 1 MW or more of total site load at this address, today or by a stated date. Write the amount and the date	A large service is installed and the utility has not yet answered. Or the utility's answer depends on a study	The utility states in writing that less than 1 MW is available, with no upgrade path or date

Status ☐ Good ☐ Maybe ☐ Stop ☐ Unknown

Evidence, source and date _____

_____

2. Installed service

Good	Maybe	Stop
5,000 kVA or more on the nameplates, or a substation on site that serves this parcel	1,500 to 5,000 kVA	Under 1,500 kVA, and line 1 is not "good"

Status ☐ Good ☐ Maybe ☐ Stop ☐ Unknown

Evidence, source and date _____

_____

3. Distance to a substation of the serving utility

Good	Maybe	Stop
On site or next door, about a quarter mile or less	Within about 2 miles	More than about 2 miles, and no large service installed

Status ☐ Good ☐ Maybe ☐ Stop ☐ Unknown

Evidence, source and date _____

_____

Notes for this gate:

- Line 1 is total site load, not IT load. Compare the utility's figure with the target size at the top of the sheet. A confirmed 2 MW is "good" on this line and still too small for a buyer who needs 6.

- Line 2 measures equipment. Chapter 2 gives the nameplate arithmetic. A nameplate is not a promise from the utility. Do not add two services together.
- Line 3 is a clue about the work to connect. A nearby substation proves neither service nor spare capacity. Record which map you used and its date.
- A "stop" on line 2 or line 3 alone does not stop the building. The utility's written answer on line 1 controls.

Gate 2. Permits

4. Zoning

Good	Maybe	Stop
The code lists the use, or a use that plainly covers it, as allowed by right in this district	The use needs a special or conditional approval. Or the code does not name it and staff must interpret	The use is prohibited, or a recorded restriction blocks it

Status ☐ Good ☐ Maybe ☐ Stop ☐ Unknown

Evidence, source and date _____

_____

5. Flood designation

Good	Maybe	Stop
Building and yard outside the mapped Special Flood Hazard Area	Part of the yard is in a mapped flood hazard area, or the area is mapped as moderate risk	Not used. A flood designation is a flag for review, not a stop

Status ☐ Good ☐ Maybe ☐ Stop ☐ Unknown

Evidence, source and date _____

_____

6. Neighbors and water

Good	Maybe	Stop
Industrial or vacant neighbors, and a cooling design that uses little water	Homes in sight but buffered by distance or a road. Or water use not yet known	Not used. Homes at the property line or a large new water withdrawal are "maybe", with a note

Status ☐ Good ☐ Maybe ☐ Stop ☐ Unknown

Evidence, source and date _____

_____

Notes for this gate:

- Line 4: copy the exact words of the listed use from the code.
- Line 5: if the building itself is in a mapped Special Flood Hazard Area, mark "maybe" and write the zone. The engineers and the insurer decide what it costs.
- Line 6: low water use is not an automatic exemption from any permit.

Gate 3. Structure

7. Floor type and the engineer's finding

Good	Maybe	Stop
A licensed structural engineer has reviewed the floor and the delivery path for the intended rack layout and found them suitable, in writing	Slab on grade, not yet reviewed. Or an elevated floor awaiting an engineer's review	A licensed structural engineer has found the floor unsuitable and strengthening not feasible

Status ☐ Good ☐ Maybe ☐ Stop ☐ Unknown

Evidence, source and date _____

_____

8. Clear height

Good	Maybe	Stop
16 feet or more	12 to 16 feet	Under 12 feet, and the buyer has confirmed that is too low

Status ☐ Good ☐ Maybe ☐ Stop ☐ Unknown

Evidence, source and date _____

_____

Notes for this gate:

- Line 7 asks two things: what kind of floor is it, and what has an engineer found? Write the floor type and the source. Do not write a pounds-per-square-foot figure as a pass or a fail. A floor's code design load cannot be compared with a rack's weight to pass or fail a building.
- Until an engineer has reported, line 7 is "maybe". Only an engineer's finding makes it "good" or "stop".
- Line 8: ask each buyer for its own minimum.

Gate 4. Cooling

9. Yard for cooling and generators

Good	Maybe	Stop
Open yard the owner controls on two or more sides, with truck access and no homes adjoining	Yard on one side only. Or no yard, and equipment would have to go on a roof or another route that an engineer must check	A mechanical engineer has found no workable yard, roof or other route

Status ☐ Good ☐ Maybe ☐ Stop ☐ Unknown

Evidence, source and date _____

_____

Note for this gate: a mechanical engineer sizes the plant. You are recording whether there is anywhere to put it. No yard is a "maybe" until an engineer has looked.

Gate 5. Connectivity

10. Fiber carriers and routes

Good	Maybe	Stop
Two or more carriers confirm fiber to the building, entering by different routes	One carrier with fiber. Or two that may share a route. Or map listings and markers only	Carriers confirm no fiber at or near the address, and no route they will build

Status ☐ Good ☐ Maybe ☐ Stop ☐ Unknown

Evidence, source and date _____

_____

Note for this gate: the FCC map reports mass-market internet service. A listing does not prove data center connectivity, and a missing listing does not prove there is no fiber. Only a carrier's written response makes this line "good" or "stop".

After the gates. The owner and the paper

11. Owner and title

Good	Maybe	Stop
One decision maker, open to a sale or a lease, who shares bills and drawings. A signed brokerage agreement is in your broker's file	Interested but slow. Several owners. Or wants a price before facts. Or no signed agreement yet	A title dispute. Another party already holds rights. Or the owner will share nothing

Status ☐ Good ☐ Maybe ☐ Stop ☐ Unknown

Evidence, source and date _____

_____

Questions to carry

For the owner

- Can we read the main switchgear and transformer nameplates together?
- Can I see electric bills from the busiest year, showing peak demand?
- Do you have the original structural drawings or a slab report?
- What was the heaviest equipment on this floor, and did it have its own foundation?

- Which outdoor areas are inside your property line and free of easements?
- Are there recorded use restrictions, easements or covenants on the parcel?
- Has the building or yard ever flooded?
- Which carriers have equipment in your telecom room?
- Who else has to agree before you can sell or lease?

For the utility, from the owner or with the owner's written permission

- What capacity can you serve at this address today without new construction?
- What would it take, and how long, to serve the amount we need?
- Which substation and feeder serve this address?
- Which rate schedule would a load of this size take?

For a buyer

- Is your megawatt figure IT load or total site load?
- What minimum clear height do you need?
- Does your cooling design evaporate water?
- Which network hub must the site reach?

Where the building stands

Lines marked Stop (list them, with the reason and the source)	_____
Lines marked Good, with the document that proves each one	_____
Lines still Unknown, and who has been asked	_____
Next written answer expected, from whom and by when	_____

How to read it.

- **A "stop" on line 1, 4, 7 or 11 stops the building.** Write down the reason and the source, and tell the owner.
- **No "stop":** keep working the unknowns, starting with line 1. Power first, always.
- **Ready to show a buyer** is this book's meaning of "qualified". It means line 1 is "good", line 4 is "good" or "maybe", line 11 is "good", and no line says "stop". The other lines may still be "maybe" or "unknown". Say so in the fact file.

Do not count the lines. One fatal problem can end a project. Several fixable ones need not. A sheet with many unknowns means you do not have the facts yet. It does not mean the building is poor.

> **This sheet is not an approval.** Nothing on this page states capacity, feasibility, value or a pass. The serving utility confirms power in writing. Licensed engineers decide what the building can carry and cool. Local officials decide what is permitted.

WORKSHEET 3 OF 7

Sample Documents

Copy these pages. They go with chapter 14, "One Deal, Start to Finish".

> **Samples, not forms.** Every document here is written for the made-up printing plant in chapter 14. No real property, owner, utility or company is described. Each is marked "Sample. Have your broker and attorney adapt it." Take that literally. Your brokerage has its own forms, your state has its own rules, and the two outlines at the end are lists of business points for an attorney to draft from. They are not contract language. Any number shown is an illustrative number, not market data.

The six samples, in the order a deal uses them:

1. The first-call note, for an owner who says "not now".
2. The thank-you note after the walk.
3. The owner's load inquiry letter to the utility.
4. The one-page building fact file, filled in.
5. A non-disclosure agreement outline.
6. A letter of intent outline with a utility contingency.

1. The first-call note

Sample. Have your broker and attorney adapt it.

When to use it. The owner said no, or said "send me something". Chapter 9 promises this note. It is one page, it asks for nothing, and it tells the owner exactly what you were looking for.

> [Date]
>
> Dear [Owner],
>
> Thank you for taking my call about your building on [street]. You said the timing is not right, and I will not call again unless you ask me to. Here, in one page, is what I was looking for.
>
> **Why your building.** It came up in the public property records because of what it was built for. Buildings made for heavy industry sometimes have three things that are hard to find together: a large electrical service, a strong ground-level floor and open yard.

Why now. Companies that run artificial intelligence computers are reported to be looking for existing buildings that already have heavy power. Most buildings will not qualify. A few will, and their owners will know something about their property that most owners do not.

What I would ask for. Twenty minutes with you in the main electrical room, without opening anything, and one electric bill from a year when the building was running at full production.

What you would get. A plain written summary of what is there, and a list of the questions that only your utility and a licensed engineer can answer. If the building does not look like a fit, I will tell you why.

What I am not saying. I do not have a buyer. I am not quoting a price. I am not telling you how much power the building can get. Only the utility can say that.

If this is ever useful, my number is below.

[Name], [license type], [brokerage], [phone], [email]

2. The thank-you note after the walk

Sample. Have your broker and attorney adapt it.

When to use it. The same day as the visit. Chapter 9 says to state what you saw in plain terms, list what the owner offered to look for, and say what you will do next and by when.

> [Date]
>
> Dear Frank,
>
> Thank you for showing me the building this morning. Here is what I wrote down, so that you can correct anything I got wrong.
>
> ### What I saw
>
> - A pad-mount transformer at the northeast corner. Its nameplate reads 2,500 kVA. You told me the utility owns it.
> - Main switchgear in the electrical room. Its nameplate reads 480 volts, 4,000 amps, three-phase. A single-line diagram dated 1988 hangs on the wall.
> - The press hall floor is a slab on the ground. The two press pits were filled in 2019.
> - About 26 feet to the lowest steel, from your drawings.
> - A paved lot along the east side, roughly 150 by 350 feet by my pacing.
> - One fiber marker post at the driveway.
>
> These are observations. They are not conclusions. A nameplate is the size of the equipment. It is not what the utility will deliver today.
>
> ### What you offered to look for
>
> - Twelve electric bills from a full-production year.
> - The original structural drawings in the flat file. Please keep them somewhere dry.
> - Any record of how the press pits were filled.
> - Any environmental reports, and any letters from the utility about the service.
>
> ### What I will do next
>
> By [date] I will send you a one-page summary of the five things a buyer would check, with what is known and what is not. I will show the photographs and my notes to no one without your say-so.
>
> **The questions I cannot answer.** How much power the utility can deliver here, and whether the floor suits the equipment. The utility answers the first, in writing. A licensed structural engineer answers the second.

> Thank you again.
>
> [Name], [license type], [brokerage], [phone], [email]

3. The owner's load inquiry letter

Sample. Have your broker and attorney adapt it.

When to use it. After the brokerage agreement is signed. The owner signs and sends it. Chapter 4 lists the items and explains why the owner is the sender. If the owner wants help choosing the amount, the owner hires an electrical engineer for that.

Before it goes out. Ask the utility's business or large-customer desk who should receive it. Keep a dated copy.

> [Owner's company letterhead]
>
> [Date]
>
> [Utility name] Attention: [name or role given by the utility's business customer desk]
>
> **Re: Request for information on electric service capacity. [Street address]. Parcel number [number]. Former account number [number].**
>
> Dear [Name]:
>
> [Owner's company] owns the building at the address above. It operated as a printing plant under the account above until 2019. We are evaluating a new use for the building, and we ask for the utility's written answers to the questions below. This letter is a request for information. It is not an application for service.
>
> ### What is on the site today
>
> - One pad-mount transformer at the northeast corner of the building. Nameplate: 2,500 kVA. We understand it belongs to the utility.
> - Customer main switchgear. Nameplate: 480 volts, 4,000 amps, three-phase.
> - Photographs of both nameplates and a copy of our 1988 single-line diagram are enclosed.
> - Our records show a highest billed demand of 1,640 kW, in August 2016.
>
> ### Our two main questions
>
> 1. What demand can you serve at this address today, at the meter, with the facilities now in place?
> 2. What would be required to serve up to 4.0 MW of demand at the meter, and by what date could that service be energized?
>
> The figure of 4.0 MW is being explored. It is not a firm request. A possible ramp would be about 2.0 MW in the first year of operation and the balance in the second year. The load would run around the clock.
>
> ### Four further questions
>
> 1. Is any capacity still committed to this site from the former account?

> 2. At what voltage would you serve each of the two amounts above, and who would own the transformer?
> 3. Would a study be required for either amount? If so, what is the fee, and what would the customer be asked to pay toward new facilities?
> 4. Does your reply reserve any capacity for this site? If so, for how long?
>
> Please reply in writing to the address below, and tell us who our contact should be for any later application.
>
> We have authorized [agent's name] of [brokerage] to help us keep track of this request. Please address your reply to us.
>
> Sincerely,
>
> [Owner's name and title] [Owner's company, address, phone, email]
>
> Enclosures: nameplate photographs (2); single-line diagram, 1988.

What to leave out. The word "data center" is the owner's choice. Some owners name the use, and some describe the load. Either way the letter must be true. Do not ask for more than the building and its yard can use. Do not copy a buyer on it.

4. The one-page building fact file

Sample. Have your broker and attorney adapt it.

When to use it. After the utility has replied. It is the summary page of the fact file in chapter 13. The owner sees it first and decides who sees it next. It goes to a buyer only after a signed non-disclosure agreement.

Building fact file: summary

Property: former printing plant, [street address], [county, state]. Parcel [number]. **Owner:** [company]. **Prepared by:** [agent], [brokerage]. **Date:** [date]. **Version:** 3.

Read this first. This page lists records, observations and open questions. It is not an engineering report, a survey, a title opinion or an appraisal. It states no conclusion about electrical capacity, structural adequacy, cooling or approvals. Every fact has a source and a date. Confirm each one.

	What is known (source, date)	What is not known	Who can answer
Building	60,000 sq ft, one story, built 1988 (county property record, [date]). Slab on the ground in the press hall; about 26 ft to lowest steel (owner's 1988 drawings, seen [date])	Present condition of roof and slab	Licensed engineers
1. Power	Utility transformer nameplate 2,500 kVA; customer main switchgear nameplate 480 V, 4,000 A, three-phase (photographed with owner, [date]). Highest billed demand 1,640 kW, August 2016 (owner's bills). **Utility's letter of [date]:** up to 2.0 MW of demand at the meter can be served with existing facilities, after a new service application and an equipment inspection. 4.0 MW would require a larger transformer and line work, set by a study. The letter reserves no capacity	Scope, cost and date for 4.0 MW. Condition of the 1988 switchgear	The utility, by study. A licensed electrical engineer and a testing firm

	What is known (source, date)	What is not known	Who can answer
2. Permits	Light industrial district (county zoning map, [date]). Use table lists "data processing facility" as permitted (code section [number], text attached). Minimal flood hazard (FEMA map panel [number], effective [date]). Nearest homes about 900 ft, across the rail line (aerial, [date])	How staff would classify the project. Standards for outdoor equipment and generators	Planning staff, in writing. A land use attorney
3. Structure	Original structural drawings exist (owner's flat file). Two press pits filled in 2019 (owner)	Slab capacity for any stated load. What the pits were filled with	A licensed structural engineer
4. Cooling	Paved lot on the east side, about 150 × 350 ft (paced, [date]). No cooling equipment suited to the new use is on the site	Easements and setbacks in the lot. Heat rejection layout	A surveyor. A licensed mechanical engineer
5. Connectivity	One fiber marker post at the driveway (photograph, [date]). Two providers reported at the address (FCC National Broadband Map, [date]; the map describes mass-market service)	Which carriers can serve the site, by which routes	The carriers, through a survey
Other	A former ink and solvent room with a floor drain (owner, [date]). No environmental report on file. Owner reports no mortgage and no option	Environmental condition. Title	An environmental professional. A title company

Attachments: A. Parcel record. B. Zoning text. C. Flood map panel. D. Nameplate photographs. E. Single-line diagram, 1988. F. Utility's letter of [date]. G. List of owner's drawings. *Electric bills are held by the owner and are not attached.*

Confidential. Provided under the non-disclosure agreement dated [date]. Do not contact the utility, planning staff or occupants about this property without the owner's written consent.

Check it before it leaves. No sentence says "can support", "available", "ready", "approved" or "pass". The utility's letter is described in the utility's words. Every number has a source and a date.

5. Non-disclosure agreement: outline

Sample. Have your broker and attorney adapt it.

When to use it. Before the fact file, the bills or the utility's letter go to a prospective buyer. The owner's attorney prepares the agreement. This outline lists the business points to raise with that attorney. It is not contract language.

Point	What to settle	Why it matters on these deals
Parties	The owner's company and the buyer's company, by legal name	The buyer may act through a new entity. The attorney confirms who is bound
One-way or mutual	Mutual	The buyer wants its name and its requirement kept quiet as much as the owner wants the bills kept private
What is confidential	The fact file, bills, utility correspondence, drawings, reports, and the fact that the parties are talking	Utility letters and bills are the owner's records
Permitted recipients	Employees, attorneys, engineers, lenders and brokers who need the information and are bound by the same terms	The buyer's engineers must be able to read the file
Permitted use	Evaluating this property and nothing else	
No contact	No contact with the utility, the planning office, tenants or neighbors about the property without the owner's written consent	One voice speaks to the utility at a time. Chapter 14 explains why
No obligation	Neither party is bound to make a deal	
Brokers	The buyer acknowledges who represents the owner	It supports the buyer registration
Term	A stated period	The attorney sets it
Return or destruction	Of records, at the end or on request	
Exceptions	Information already public, already known or required by law to be disclosed	Standard. The attorney words them
Governing law and signatures	An authorized signer for each party	

Your part. Make sure the agreement is signed and dated before the file goes out. Keep a copy with the buyer registration. Do not edit the agreement yourself.

6. Letter of intent: outline, with a utility contingency

Sample. Have your broker and attorney adapt it.

When to use it. When a registered buyer is ready to state terms. Either side may draft it, and both attorneys read it before anyone signs. This outline is for a purchase. For a lease, the same contingency logic applies, and the attorneys change the rest. It is a list of business points, not contract language. Every time period shown is an illustrative number, not market data.

Term	What the outline says	Why it is there
Parties	Buyer's purchasing entity; the owner's company	
Property	Parcel, building, fixtures, and the owner's drawings and records	The drawings have value. Name them
Price	[Amount]	Set by the parties. This book gives none
Deposit	[Amount], held in escrow by a title company	
Due diligence period	60 days from the signing of the purchase agreement (illustrative number, not market data). The buyer may inspect, test and study, and may end the deal and recover its deposit	Covers structure, electrical equipment, environmental, survey, title and zoning
Utility contingency	The buyer's duty to close depends on receiving, within 180 days of signing (illustrative number, not market data), a written offer of service from the serving utility for at least [3.9] MW of demand at the meter, with an in-service date no later than [date] and a customer cost no greater than [amount], or otherwise acceptable to the buyer. If it does not arrive, the buyer may end the deal and recover its deposit	The utility's study runs on the utility's clock. This clause lets both sides wait for the one answer that decides the deal
Extension	The buyer may extend the utility contingency once by [period], by making [amount] of the deposit non-refundable	Pays the owner something for holding the building
Deposit schedule	Refundable through due diligence. [Portion] non-refundable after it, except for a seller default or a failed utility contingency, as the parties agree	The attorneys set the exceptions

Term	What the outline says	Why it is there
Seller cooperation	The owner will sign a letter of authorization allowing the buyer and its consultants to apply to the utility and to speak with planning staff about the parcel, and will sign applications that need the owner's name. The buyer pays all fees	From this point the buyer speaks to the utility
Early access	The buyer's consultants may enter and test before the purchase agreement is signed, under an access agreement with insurance and a duty to repair	Lets the engineers start during exclusivity
Zoning and permits	The buyer may seek a written zoning verification. Any approvals the closing depends on are listed	Chapter 6 covers the question to ask
Environmental	The buyer may order a Phase I assessment and, if it recommends sampling, the sampling	Sampling may outlast due diligence. Say what happens then
Title and survey	A title commitment and a survey. A period for objections	Easements can take yard
Exclusivity	The owner will not negotiate with others for 45 days (illustrative number, not market data)	
Closing	[Number] days after the contingencies are satisfied or waived	
Brokers	The seller pays the commission under its listing agreement with [brokerage]. Each party states it has dealt with no other broker	It matches the brokerage agreement
Confidentiality	The non-disclosure agreement stays in force	
Binding effect	Confidentiality, exclusivity and access are binding on signing. All other terms are not binding until a purchase agreement is signed	The attorneys word this with care

Three things to check before the owner signs.

1. The megawatt figure says "at the meter". An IT load figure in this clause would leave the two sides arguing about a ratio.
2. The utility contingency runs longer than the due diligence period.
3. The brokers clause names your brokerage the way your agreement does.

The letter of authorization that follows the LOI is one page. The owner states that the named buyer and its named consultants may request information and apply for service for the parcel, gives a date on which the

authority ends, and says the owner is not agreeing to pay any fee or sign any service agreement. The owner's attorney writes it.

WORKSHEET 4 OF 7

First-Call Script and Question Lists

Pages to copy. These come from chapter 9, "The Walk and the Owner Call". Chapter 4 covers the owner's full written inquiry to the utility, and the sample documents include the letter.

Before you use it. Put the script in your own words. Follow your broker's policies and your state's rules on prospecting calls, including any do-not-call procedure. On the owner's property, follow the owner's rules. Do not open or touch electrical equipment, and do not enter an electrical room alone.

Page 1. The ninety-second owner script

The only goal of this call: a site visit and one electric bill.

Before you dial:

- ☐ The building has been through the ten-minute screen. Result: go and see it.
- ☐ My broker knows which building I am calling about.
- ☐ I checked whether another brokerage has the listing.
- ☐ I followed my office's calling rules.

1. Who you are

> "Hello, is this _____? My name is _____. I am a commercial real estate agent with _____ in _____. Do you have two minutes?"

2. Why them

> "I am calling about your building on _____. It came up in my research in the public records, because of what it was built for. This is not an offer, and I do not have a buyer yet."

3. The reason to listen

> "AI companies are reported to be looking for existing buildings that already have heavy power. I am finding out which buildings here could qualify for a closer look. If yours can, you will know something about it that most owners do not. If it cannot, I will tell you why."

4. The ask

> "I would like twenty minutes with you at the building. I would like to see the main electrical room with you, without opening anything, and one electric bill from a year when the building was running at full production."

5. No pressure

> "Afterward I will tell you what I saw, and which questions only your utility and an engineer can answer. If it does not look like a fit, I will tell you why, and it will have cost you twenty minutes. Would _____ or _____ work?"

Do not say

- A price.
- "I have a buyer," unless you do.
- Any number of megawatts.
- That the building "works", "fits" or "is ready".

If the owner says no: "Would it be all right if I sent you a one-page note about what I was looking for, in case it is ever useful?" Send it (a sample is in the sample documents). Leave them alone.

If the owner starts talking: let them. Take notes.

Visit set for: _____ Bill offered: yes / no Notes written same day: ☐

Page 2. Questions for the owner

Ask two or three on the phone. Bring the rest to the visit. Write the answer, the date and who said it.

The building's history

- [ ] What was made or done here, and when did full operation stop?
- [ ] Is the building in use, leased or vacant today? Any plans for it?

Power

- [ ] Which electric utility serves you? Is the account active?
- [ ] Could I see bills from a busy year? Twelve months if you have them.
- [ ] Is there a single-line diagram or any electrical drawings?
- [ ] Is there a substation or large transformer on the site? Who owns it, you or the utility?
- [ ] Was any electrical equipment removed when operations stopped?
- [ ] Are there generators? What do they back up?

Structure and site

- [ ] Do you have the original structural drawings, especially the slab and foundations?
- [ ] Did any heavy machines sit on their own foundations? Were pits filled later?
- [ ] Has water ever stood in the yard or come into the building?
- [ ] Do you have a survey or a site plan?

Fiber

- [ ] Who provides internet and phone service? Was there ever a second provider?

Environment and title

- [ ] Are there any environmental reports?
- [ ] Is there a mortgage, lien, easement or recorded restriction on use?
- [ ] Who else owns the property with you? Who would have to agree to a sale or lease?
- [ ] Has anyone else approached you? Does anyone hold an option or an agreement?

The relationship

- [ ] Do you already work with a broker or an attorney on this property?

Documents to leave on the owner's list

- [ ] Electric bills from a full-production year.

- [ ] Single-line diagram and electrical drawings.
- [ ] Original structural drawings, and drawings of later changes.
- [ ] Survey or site plan.
- [ ] Roof information: age, and anything mounted on it.
- [ ] Environmental reports.
- [ ] Generator and fuel tank records.
- [ ] Telecom contracts or drawings showing where cables enter.
- [ ] Any letters from the utility about the service.

If a document does not exist, write "does not exist".

The sentence for the bill

> "A bill from _____ shows a peak demand of _____ kW. That is what the building drew then. It is not what the utility will serve today."

The sentence for the nameplate

> "Main switchgear nameplate: _____ volts, _____ amps. Utility capacity not confirmed."

Page 3. Questions for the utility

These go out from the owner, or from you with the owner's written permission. They are the first questions. Chapter 4 lists what a full written inquiry contains.

Sent by: _____ Date sent: _____ Written permission on file: ☐

- ☐ What service is installed at this address today, and is the account active?
- ☐ Is any capacity still committed to this site?
- ☐ How much can you serve here now, at the meter, without new construction?
- ☐ What would be needed to serve _____ MW, and by when?
- ☐ Who would pay for that work? Is there a study fee or a deposit?
- ☐ At what voltage would you serve a load of that size?
- ☐ Does your answer reserve capacity, and for how long?
- ☐ Who is the right contact for a request like this?
- ☐ Which rate schedule would a load of that size take?
- ☐ Please reply in writing.

The amount in the blank is the owner's decision, made with a buyer's requirement or an engineer's advice in hand. Ask for what the building and its yard can really use.

When the reply comes, record five things

- ☐ The amount, and whether it is stated at the meter.
- ☐ The date, and anything it depends on.
- ☐ The conditions: what has to be built, and by whom.
- ☐ The cost: study fee, contribution, deposit.
- ☐ The shelf life: whether the reply reserves anything, and for how long.

Until that reply is in the file, the page says: **"Utility capacity not confirmed."**

WORKSHEET 5 OF 7

The Thirty-Day Plan

Copy this page. This is chapter 13 as a checklist.

> This is a work plan, not a forecast. Change the pace to suit your business. **A building is qualified when the utility has answered in writing and its Deal Readiness Tracker reads "ready to show a buyer". An inquiry under way is not that.**

Start date: _____ **Broker told on:** _____

Before day one

- ☐ My broker knows what I am doing and how the brokerage wants these listings handled.
- ☐ I have started my state's answers to the ten licensing questions (see the State Questions worksheet).
- ☐ A daily slot is blocked on my calendar.
- ☐ One folder for each building, and one sheet with a row for each building and a column for each gate.

Week 1. List and desk screens

- ☐ Day 1: long list of ten to twenty parcels from listings and public records, each with its source and date.
- ☐ Days 2 and 3: the ten-minute screen on every parcel. One line for each gate: what I know, what I do not know, who can tell me.
- ☐ Every parcel has a result: stop, or go and see it. Every gate has a status.
- ☐ Day 4: top five ranked.
- ☐ Day 5: top five photographed from public roads only.
- ☐ My state's license search pages found and bookmarked: engineers, contractors, fire protection.
- ☐ Nothing on any sheet claims capacity, approval or a pass.

Friday counts: buildings screened _____ owner conversations _____ facts confirmed in writing

Week 2. Owner calls and one walk

- [ ] Days 6 and 7: owner names and mailing addresses for the top five. First-call script practiced out loud.
- [ ] Days 8 and 9: all five owners called. Dates noted. Second call placed where needed.
- [ ] Day 10: one building walked, with the owner present.
- [ ] No equipment opened. No electrical room entered alone.
- [ ] Nameplates, yard, docks and delivery path photographed.
- [ ] Asked for: a bill from a full-production year, the single-line diagram, structural drawings.
- [ ] Deal Readiness Tracker started the same day, with evidence and source on every line.
- [ ] Red flags sorted by severity, not counted.
- [ ] Open questions listed, each with the person who can answer it.

Friday counts: buildings screened _____ owner conversations _____ facts confirmed in writing

---

Week 3. The agreement, the owner's utility inquiry and the first introductions

- [ ] Day 11: one building chosen. Reason written down.
- [ ] Day 12: brokerage agreement signed through my broker, before any letter is drafted. It names the fee, who owes it, the earning event for a sale, a lease, a ground lease and a joint venture, the due date, the term and how a buyer I introduce is registered.
- [ ] Days 13 and 14: written load inquiry prepared with the owner. It asks for the reply in writing.
- [ ] Inquiry sent by the owner, or by me with the owner's written permission. Date sent: _____
- [ ] Day 15: each open technical question matched to a discipline on my bench.
- [ ] Two names offered to the owner for each, with the license record and the date I checked.
- [ ] The owner decides whom to hire, and hires them directly.
- [ ] No contact with a utility or a planner that the owner did not authorize.
- [ ] Owners from week 2 who did not answer: called again.

Friday counts: buildings screened _____ owner conversations _____ facts confirmed in writing

---

Week 4. The fact file and the buyer list

- [ ] Days 16 to 18: two-page fact file written. Five sections, one for each gate. Each has what is known, what is not known and who can answer.
- [ ] Attachments: parcel record, zoning text, flood map panel, nameplate photographs, bill, drawings, tracker sheet.
- [ ] Every fact has a source and a date.
- [ ] No sentence states capacity. No sentence says pass, approved or ready.
- [ ] Day 19: research list of ten buyer targets started. None contacted about this building without the owner's consent.
- [ ] Day 20: the owner has the file and has said who else may see it.

Friday counts: buildings screened _____ owner conversations _____ facts confirmed in writing

---

On day 30 I have

- [ ] A screened list of ten to twenty buildings.
- [ ] Owners who know my name and what I do.
- [ ] One building with facts on all five gates and a list of open questions.
- [ ] A utility inquiry under way, if the owner agreed.
- [ ] A bench with names and license records.
- [ ] My role in writing, or a dated note of where that stands.

Rules that do not bend

- [ ] No promise of a buyer, a price or a timeline.
- [ ] No contact with a utility or a planner about an owner's parcel without the owner's permission.
- [ ] Installed equipment and confirmed utility capacity stay in separate sentences.
- [ ] No payment to an unlicensed person for a lead, until I have checked my state's rule.
- [ ] No brokerage money outside the way my state requires it to flow.
- [ ] Every number carries its source and its date.
- [ ] The owner hires the experts.

- [ ] No building is called qualified until the utility has answered in writing and its tracker reads "ready to show a buyer".

After day 30

- [ ] Start weeks 1 and 2 again on a second batch.
- [ ] When the utility answers, read the answer with the owner and write its conditions into the fact file word for word.
- [ ] Re-check any fact that has gone stale before relying on it.
- [ ] When a real buyer requirement arrives, call a broker who has closed one. Chapter 14 shows the steps from there.

WORKSHEET 6 OF 7

Vendor Bench Checklist

Copy this page. This is chapter 12's bench as a table.

The owner or the buyer chooses, hires and pays every person on this page. You introduce. No single conversion needs every role. This checklist works in any state. The "where to verify" column is the worked example: Florida. It was read on 2026-11-11 and is not legal advice. In your state, find that state's agency for each license, using the lookup pattern on the State Questions Worksheet, and write it over the Florida entry. "No license of its own" means Florida has no license for that role as such. It does not mean no license applies. What the person actually does decides that.

Building: _____ **State and county:** _____ **Date started:** _____

Designers and site specialists

Electrical engineer		
What they answer	**When to call**	**License to verify, and where (Florida)**
What the building can do with the power the utility delivers; whether old equipment can be reused	First technical look, or earlier to help frame the utility inquiry	Professional engineer. Florida Board of Professional Engineers licensee search; DBPR also lists "Engineers"
1. Name and firm _____ Phone _____		
License no., date checked, notes _____		
2. Name and firm _____ Phone _____		
License no., date checked, notes _____		

Mechanical engineer

What they answer	When to call	License to verify, and where (Florida)
How much heat must leave the building, with what plant, and where it goes	First technical look	Professional engineer. Same

1. Name and firm _____ Phone _____

License no., date checked, notes _____

2. Name and firm _____ Phone _____

License no., date checked, notes _____

Structural engineer

What they answer	When to call	License to verify, and where (Florida)
Whether the floor, the delivery path and the roof can carry the loads	First technical look, before anyone says the floor works	Professional engineer. Same

1. Name and firm _____ Phone _____

License no., date checked, notes _____

2. Name and firm _____ Phone _____

License no., date checked, notes _____

Civil engineer

What they answer	When to call	License to verify, and where (Florida)
Drainage, paving, grading and yard pads	Design, or earlier if the yard floods or is tight	Professional engineer. Same

1. Name and firm _____ Phone _____

License no., date checked, notes _____

2. Name and firm _____ Phone _____

License no., date checked, notes _____

Geotechnical engineer, if needed

What they answer	When to call	License to verify, and where (Florida)
What is under the slab and the yard	When the structural or civil engineer asks	Professional engineer. Same. DBPR also lists "Geologists"

1. Name and firm _____ Phone _____

License no., date checked, notes _____

2. Name and firm _____ Phone _____

License no., date checked, notes _____

Surveyor

What they answer	When to call	License to verify, and where (Florida)
Where the boundary, easements and improvements really are	Before a contract relies on yard area	Surveyor and mapper, chapter 472. Department of Agriculture and Consumer Services

1. Name and firm _____ Phone _____

License no., date checked, notes _____

2. Name and firm _____ Phone _____

License no., date checked, notes _____

Environmental consultant (Phase I ESA)

What they answer	When to call	License to verify, and where (Florida)
Whether past use left contamination	Before a purchase closes; the buyer's attorney and lender set the scope	Ask how the person meets the federal "environmental professional" definition (40 CFR 312.10). If it rests on a PE or geologist license, verify that license

1. Name and firm _____ Phone _____

License no., date checked, notes _____

2. Name and firm _____ Phone _____

License no., date checked, notes _____

Fiber or low-voltage contractor

What they answer	When to call	License to verify, and where (Florida)
Which carriers reach the building, by which routes; who installs cabling inside	Carrier survey once a buyer is interested; installation during construction	Ask which electrical or alarm license covers the scope. DBPR, "Electrical Contractors"

1. Name and firm _____ Phone _____

License no., date checked, notes _____

2. Name and firm _____ Phone _____

License no., date checked, notes _____

Utility or energy consultant

What they answer	When to call	License to verify, and where (Florida)
How to frame the load inquiry, read the tariff and compare rates	Before the inquiry, if the owner wants help	No license of its own. Verify any engineer's license claimed

1. Name and firm _____ Phone _____

License no., date checked, notes _____

2. Name and firm _____ Phone _____

License no., date checked, notes _____

Data center consultant or owner's representative

What they answer	When to call	License to verify, and where (Florida)
What a buyer will expect; whether the project stays on scope and schedule	When the owner commits money to design	No license of its own. Verify any engineer's or contractor's license claimed. See chapter 11 on what this role may not do

1. Name and firm _____ Phone _____

License no., date checked, notes _____

2. Name and firm _____ Phone _____

License no., date checked, notes _____

Commissioning agent

What they answer	When to call	License to verify, and where (Florida)
Whether the finished systems work together as designed	Named during design; tests at the end	No license of its own. Verify any engineer's license claimed

1. Name and firm _____ Phone _____

License no., date checked, notes _____

2. Name and firm _____ Phone _____

License no., date checked, notes _____

Legal, title, money and risk

Land use or zoning attorney

What they answer	When to call	License to verify, and where (Florida)
The approval path, who decides, and the risks	When the code is unclear or a special approval is needed	Attorney. The Florida Bar, "Find a Lawyer"

1. Name and firm _____ Phone _____

License no., date checked, notes _____

2. Name and firm _____ Phone _____

License no., date checked, notes _____

Real estate attorney

What they answer	When to call	License to verify, and where (Florida)
The contract, the lease or the venture agreement	Before the owner signs anything with a buyer	Attorney. Same

1. Name and firm _____ Phone _____

License no., date checked, notes _____

2. Name and firm _____ Phone _____

License no., date checked, notes _____

Title company

What they answer	When to call	License to verify, and where (Florida)
Who owns the property; liens, easements and restrictions	Early in a contract	Title insurance agent. Department of Financial Services licensee search, category "Title"

1. Name and firm _____ Phone _____

License no., date checked, notes _____

2. Name and firm _____ Phone _____

License no., date checked, notes _____

Insurance broker

What they answer	When to call	License to verify, and where (Florida)
What coverage the building, the work and the operation need	When a flood flag appears; again before construction	Insurance agent. Department of Financial Services licensee search

1. Name and firm _____ Phone _____

License no., date checked, notes _____

2. Name and firm _____ Phone _____

License no., date checked, notes _____

Appraiser

What they answer	When to call	License to verify, and where (Florida)
A formal opinion of value	When a lender or a party requires one	Certified or licensed real estate appraiser. DBPR, "Real Estate Appraisers"

1. Name and firm _____ Phone _____

License no., date checked, notes _____

2. Name and firm _____ Phone _____

License no., date checked, notes _____

Lender or capital source

What they answer	When to call	License to verify, and where (Florida)
Whether the project can be financed, and on what conditions	When a buyer or developer is serious	Not read. Ask the party's attorney

1. Name and firm _____ Phone _____

License no., date checked, notes _____

2. Name and firm _____ Phone _____

License no., date checked, notes _____

Permit expediter

What they answer	When to call	License to verify, and where (Florida)
Which permits are needed, in what order, and where an application stands	Design, where permitting is complicated	No license of its own

1. Name and firm _____ Phone _____

License no., date checked, notes _____

2. Name and firm _____ Phone _____

License no., date checked, notes _____

Broker who has closed a data center deal

What they answer	When to call	License to verify, and where (Florida)
How these deals are actually written and closed	When a real buyer requirement arrives; through your own broker	Real estate broker. DBPR, "Real Estate"

1. Name and firm _____ Phone _____

License no., date checked, notes _____

2. Name and firm _____ Phone _____

License no., date checked, notes _____

Builders

General contractor

What they answer	When to call	License to verify, and where (Florida)
What the whole job costs and how it will be run	Budget pricing during design; contract after permits are in view	General contractor (a building contractor's license is narrower). DBPR, "Construction Industry"

1. Name and firm _____ Phone _____

License no., date checked, notes _____

2. Name and firm _____ Phone _____

License no., date checked, notes _____

Electrical contractor

What they answer	When to call	License to verify, and where (Florida)
How the service, distribution and generator connections get installed	Pricing during design; installation	Electrical contractor. DBPR, "Electrical Contractors"

1. Name and firm _____ Phone _____

License no., date checked, notes _____

2. Name and firm _____ Phone _____

License no., date checked, notes _____

Mechanical or HVAC contractor

What they answer	When to call	License to verify, and where (Florida)
How the cooling plant and piping get installed	Pricing during design; installation	Mechanical or air-conditioning contractor. DBPR, "Construction Industry"

1. Name and firm _____ Phone _____

License no., date checked, notes _____

2. Name and firm _____ Phone _____

License no., date checked, notes _____

Plumber

What they answer	When to call	License to verify, and where (Florida)
Water supply, drains, and piping within the plumbing scope	Design and installation	Plumbing contractor. DBPR, "Construction Industry"

1. Name and firm _____ Phone _____

License no., date checked, notes _____

2. Name and firm _____ Phone _____

License no., date checked, notes _____

Fire sprinkler contractor

What they answer	When to call	License to verify, and where (Florida)
How the suppression system gets installed	Design, with the fire protection engineer; installation	Fire protection system contractor, chapter 633. Division of State Fire Marshal, Regulatory Licensing

1. Name and firm _____ Phone _____

License no., date checked, notes _____

2. Name and firm _____ Phone _____

License no., date checked, notes _____

Fire alarm contractor

What they answer	When to call	License to verify, and where (Florida)
How detection and alarm get installed	Same	Alarm system contractor; ask whether another electrical license also covers the scope. DBPR, "Electrical Contractors"

1. Name and firm _____ Phone _____

License no., date checked, notes _____

2. Name and firm _____ Phone _____

License no., date checked, notes _____

Roofing contractor		
What they answer	**When to call**	**License to verify, and where (Florida)**
The roof's condition; how openings and rooftop loads get sealed	First technical look if the roof is old; again before equipment goes up	Roofing contractor. DBPR, "Construction Industry"

1. Name and firm _____ Phone _____

License no., date checked, notes _____

2. Name and firm _____ Phone _____

License no., date checked, notes _____

Security contractor		
What they answer	**When to call**	**License to verify, and where (Florida)**
Fencing, access control and cameras to the buyer's written standard	Design, once the buyer's standard is known	Ask which license covers the scope; alarm systems fall under the alarm system contractor license. DBPR, "Electrical Contractors"

1. Name and firm _____ Phone _____

License no., date checked, notes _____

2. Name and firm _____ Phone _____

License no., date checked, notes _____

How to check a license

- ☐ Ask for the license number.
- ☐ Look it up at the regulator, not on the firm's own website.
- ☐ Read the record: active, the right kind for this work, and in the name of the firm that will sign.
- ☐ Write the license number and the date you checked in the last column.
- ☐ Give the owner the record, not a recommendation.

Before you hand this to an owner

- [ ] Two names for each role the building needs, where I could find two.
- [ ] Nothing on this page recommends one firm over another.
- [ ] I have asked my broker and an attorney before accepting anything of value from anyone listed.

WORKSHEET 7 OF 7

State Questions Worksheet

Use this in any state. Copy this page. Fill it in for the state where the building sits.

This worksheet works in any state. Licensing, utility regulation and permitting are state and local law. Florida is this book's worked example, and a few named sources for Texas, Georgia, Virginia, Ohio and Arizona are in the "Other states" boxes in chapters 4, 11 and 12. Everything else you look up yourself, here. These are the questions to ask. They are not answers, and this page is not legal advice. Write down who answered, and when. Rules change.

State: _____ **County or city:** _____ **Started on:** _____

How to find the official source in any state

Use the same four steps for every question on this page.

1. **Start at the government's own website.** The state legislature for statutes. The board or commission for a license. The utility commission for dockets and tariffs. The county or city for zoning and permits.
2. **Use the search the agency itself runs.** For a license it is usually called "license lookup", "verify a license" or "roster". For a tariff it is the utility's "rates and tariffs" page or the commission's docket search.
3. **Copy the words and the citation.** Write the section number, the page title and the date you read it.
4. **Then ask a person.** Take what you read to your broker, the agency's staff or an attorney in that state. What you read is a starting point. It is not a legal conclusion.

Which office to ask

What you need	Kind of office to ask	What to search for on its website
Who must hold a real estate license to earn a fee	State real estate commission or board; your broker	"license law"
Whether a real estate license is active	State real estate commission or board	"license lookup" or "verify a license"
Whether an engineer is licensed	State board of professional engineers	"roster" or "licensee search"

What you need	Kind of office to ask	What to search for on its website
Whether a contractor is licensed	State contractor board; if the state has none for that trade, the local building department	"contractor search"
Large-load or data center tariffs	State public utility or public service commission; the serving utility	"large load", "data center", "tariff book"
Who serves the address	The serving utility's new-service or business desk	"service territory map"
Building code edition	City or county building official	"adopted codes"
Zoning and use	City or county planning office	"zoning map", "use table"
Water permits	State environmental agency or regional water district	"water use permit"
Parcel records	County assessor, appraiser or auditor	"property search"

Part 1. The ten licensing questions (chapter 11)

Take these to your broker, your state's real estate regulator and an attorney.

About brokerage

#	Question	Answer	Date	Who answered (name and role)
1	How does my state define brokerage activity? Does pay have to depend on a closing?			
2	How must my compensation flow? Through my broker only?			
3	May I, or my broker, pay a referral fee to an unlicensed person? To a licensee in another state?			
4	What may an out-of-state licensee do on a property in my state? What may I do on a property in another state?			
5	What does my state require when I advertise a property feature I have not verified?			

#	Question	Answer	Date	Who answered (name and role)
6	What rules apply when I buy or sell for my own account?			
7	May I take a separate consulting fee from a brokerage client? What must I disclose?			

About engineering and contracting

#	Question	Answer	Date	Who answered (name and role)
8	How does my state define the practice of engineering? Does it include consultation, investigation or evaluation?			
9	How does my state define contracting? Does offering or bidding count?			
10	Which board licenses electrical, mechanical and fire protection contractors, and how do I verify a license?			

Where I verify a license in this state

License	Agency	Public search page	Date found
Professional engineer			
General or building contractor			
Electrical contractor			
Mechanical contractor			

License	Agency	Public search page	Date found
Fire protection contractor			
Real estate broker or sales associate			

Part 2. The three utility and permit questions (chapter 3)

Take these to the state utility commission's website, the serving utility and the local permitting offices.

#	Question	Answer	Date	Who answered, or which document
11	Is there a state data center law? At what size does it apply?			
12	Who regulates the serving utility?			
13	Who issues water permits?			

Notes for Part 2

- Question 11: write the size in the law's own words. Is it megawatts of total load at one location, or something else? Is the rule in force, or only proposed? A proposed term is not a rule in force. Look also for a commission rule or a utility tariff for large loads; chapter 4 shows four.
- Question 12: name the utility first, with your source. Then ask whether it is investor-owned, publicly owned or a cooperative, and which body sets its rates and service rules.
- Question 13: the answer may be a state agency, a regional district or a local utility. It can depend on where the parcel is.

For each answer, check

- ☐ I wrote the date.
- ☐ I wrote the name and role of the person, or the title and section of the document.
- ☐ I copied the rule's own words where I could.

- [ ] I did not assume another state's answer applies here.
- [ ] An attorney in this state has seen any answer I plan to rely on.
